

# Outdated network infrastructure is putting your network at risk:

## The time to refresh your WAN is now.

Traffic volume is exploding. Use cases are diversifying. Increased programmability needed for scale leads to massive complexity. And security, cost, and sustainability are more important than ever. The time for change is now, but many large enterprises are hesitant. It is, after all, quite an undertaking. But the cost of procrastinating will only increase.

### Delaying your network refresh puts your business at risk.

Here are three reasons you should refresh your network:

**1** **Security**  
**66%**  
higher risk for cyberattacks due to outdated networking security

**2** **Sustainability**  
**77%**  
lower power consumption than legacy networks

**3** **Performance**  
**\$300K/hr**  
avg. cost of network downtime

### Don't let outdated network infrastructure and architecture sink your network.

Juniper's AI-Native Enterprise WAN solutions delivers secure and resilient connectivity for today's cloud-centric businesses:

**Juniper is leading the market in WAN performance and productivity:** 

**1st** to 800G routing  
Juniper sets the pace, offering simple, sustainable Enterprise WAN solutions for 800G routing.

**50%** less time on incident resolution  
Rapidly identify and automate the resolution of network anomalies to ensure better uptime and user experience.

**70%** capacity optimization with SDN control  
Automate the design, deployment, and management of networks that span multiple locations and cloud environments.

**While minimizing your carbon footprint:** 

**64%** more space efficiency  
Minimize router footprint and maximize performance for more efficient, sustainable operations.

**12+** years of longevity  
Juniper increases customer investment protection with longer platform longevity and a roadmap to 800G.

**And ensuring world-class WAN security through a zero-trust approach:** 

**99.9%** exploit block rate  
Juniper's SRX4600 Firewall nearly eliminated all exploits with zero false positives, ensuring data security and peace of mind.

**5** years running  
Juniper firewall awarded highest rating of "AAA" 5 years in a row for threat protection according to CyberRatings.

**Saving you money and headaches:** 

**27%** TCO savings  
Enterprises leveraging Juniper Paragon's autonomous capacity optimization are experiencing drastic TCO savings.

AI-based insights and automation simplify deployments and reduce troubleshooting time, while a tunnel-free architecture eliminates inefficiencies, scaling limitations, and cost constraints of legacy solutions. Empower your enterprise with the sustainable and future-proof network from Juniper.  
**Stop delaying the inevitable.**
